Data Cleaning

- Drop rows with nan values at event_time & event_type

```
In [6]: print('number of rows that have nan in event_time column: ', len(df_data[df_data['event_time'].isnull
        ()]))
        rows_with_nan_eventime = df_data[df_data['event_time'].isnull()]
        # drop rows with nan values in event_time
        df_data = df_data[df_data['event_time'].notna()]
        print('number of rows without nan in event_time',len(df_data))
```

```
number of rows that have nan in event_time column:  22
number of rows without nan in event_time 19537
```

- Convert event_time from string to pandas datetime

```
In [7]: df_data["event_time"]= pd.to_datetime(df_data["event_time"],  format= "%Y-%m-%d %H:%M:%S")
```

- set event_time to be the index

```
In [8]: df_data.set_index('event_time', inplace=True)
```

```
In [9]: df_data.head()
```
